Committee selection: two separate audit scenarios

A Equal initialization

Reward the selected committee

↓

No feasible next committee

Under full membership exclusion
and global reputation thresholds

B Separate audit scenario

Two reputation levels; n = 16, k = 4
Four high-score adversaries

Uniform → Reputation-filtered

Bound exceedance	**0.245 → 0.336**
Jain index	**1.000 → 0.956**

Conditional selection-model results, not verified FPoR implementation failures.

Byzantine-bound exceedance is a composition metric, not demonstrated attack success.
